Subject: RE: Section 5 Interim Data Products for Discussion

Gene and Jim, One more thing. For the following:

Total of 2,4' and 4,4'-DDD
Total of 2,4' and 4,4'-DDD, -DDE, -DDT
Total of 2,4' and 4,4'-DDE
Total of 2,4' and 4,4'-DDT

Change to:

Total DDD
Total DDx
Total DDE
Total DDT

The text has definitions for these, so no need to present this way. No other summed COI is presented in this manner.

Subject: Section 5 Interim Data Products for Discussion

Hi Kristine –

Attached find some interim data products for discussion and use in revising the Section 5 text. Please note that the following caveat, included in the attached files applies to all products:

Do Not Quote or Cite – Preliminary Discussion Draft – May Contain Errors – Restricted Distribution

Here's a list and some notes on the attachments:

1. Revised Scatter Plots – for Indicator Contaminants only, key contaminants to follow. All data used, plots revised to breakout SIL, MC with different symbols. Note: The figure numbers/callouts need to be revised, we included but a cross-reference of 2011-to-2013 Figure numbers as page one of the .pdf
1. Revised Summary Stats Tables – now include all data. Two files: Tables 5.2-3 thru 5.2-8 and Tables D1.3-12 thru D.13-17

2. Order of Magnitude Tables for SA and All Reaches – File: Sediment Bin tables, table numbers still to be determined
3. Surface/Subsurface Histograms of Indicator Contaminants – Section 5.2 Figures, Key Contaminant plots for Appendix to follow. These plot mean concentrations rather than ratios. Some contaminants may benefit from log rather than linear scale, we are looking into that as an option
4. Box-Whisker Plot – Attached is PCB example we shared and briefly discussed on Wednesday. Other contaminants to follow.

We can discuss any or all of these as desired on our 11 am call.

Thanks,

Gene
